

Time vs. Money Under Conscription: A Hybrid Choice Analysis of Turkey’s Paid Military Service

Hakan Mülayim* Giray Girengir† İ. Berat Düzenli‡

M. Ataol Azeritürk§

November 14, 2025

Abstract

Compulsory military service in Turkey creates a time–money trade-off: a six-month standard duty versus a three-week paid exemption (paid military service). We study how individuals choose between these options, what this reveals about the economic value of time, and how sociocultural attitudes shape the decision. We develop and estimate a hybrid discrete-choice (HCM) model in which the utility difference between the paid and standard options depends on service duration, the administratively set fee, and observed socioeconomic covariates, as well as two latent constructs—national attachment and secular orientation—measured via Likert scale with measurement-invariance tests and a social-desirability control. Identification leverages policy-driven variation from periodic fee recalibrations and cohort timing, along with regional labor-market and credit conditions, and is complemented by a stated-choice experiment that randomizes time and cost attributes.

Using a survey (target $N \approx 200 - 400$), we estimate the willingness to pay for time relief from conscription, quantify heterogeneity across income, education, and attitudinal profiles. By integrating latent attitudes into the valuation of time and money, the paper contributes to the literatures on conscription and buyouts, the economics of time valuation, and the empirical methodology of HCM models in public policy settings.

Keywords: HCM, discrete choice, willingness-to-pay, conscription, Turkey.

Highlights / Contributions

- Hybrid (HCM) model of a time–money trade-off under compulsory service with priced exemption.
- Two latent attitudes (national attachment, secular orientation) enter both utilities and attribute sensitivities.
- WTP for reducing six months to three weeks; heterogeneous by attitudes, income, liquidity, and credit.
- Measurement invariance checks to ensure cross-group comparability of latent factors.

1 Introduction

Compulsory military service in Turkey creates a trade-off between time and money. State requires active duty for conscription-age men, yet an administratively set fee (paid military service) allows a reduced-duration alternative of roughly three weeks.[9] This arrangement yields a mutually exclusive choice between standard service accompanied and a priced exemption that compresses time at a fiscal cost. Within the literature, due to the nature of the topic there are not many discrete choice models involving the military experience. [6] gives a comprehensive look at the Iranian conscription as well as its economic cost. Drawbacks it has is can not give willingness to pay for an exemption at conscription and it approaches the situation omitting potential latent variables. This paper aims to verify if there are omitted social and political reasons for someone’s value for conscription.

On the other hand, Turkish conscription system has unique qualities such as paid military and its own deferral system. It has been studied qualitatively and the social effects and people’s orientation towards paid military has been argued by scholars [3] claimed that there are social and political reasons for someones choice on the conscription type and length.

Baseline random-utility models with fixed parameters evaluate this decision using only observable attributes such as, service duration and the fee as well as observed co variates. [1] However, given the sensitive sociopolitical nature of conscription, using such specific parameters may result in an inaccurate measurement of individual preferences. [8] We introduce two latent attitudes, namely national attachment and secular orientation. We hypothesize that these attitudes may systematically influence both the alternative-specific constants and the marginal utilities of time and money. To capture these effects, we use an Integrated Choice and Latent Variables (HCM) structure. [8] This design allows the

perceived fee and the dis-utility of service time to vary across individuals in theoretically interpretable ways. It also mitigates biases from omitted attitudinal heterogeneity.

We therefore organize the study around the following main and secondary research questions:

Main Research Question: How does the relative influence of observable attributes such as service duration, the paid military fee and latent variables such as national attachment and secular orientation affect the willingness to pay for the legal conscription types

Secondary Research Question 1: Do these latent attitudes moderate attribute sensitivities (e.g., does stronger national attachment attenuate the dis-utility of longer service; does greater secular orientation amplify fee sensitivity)?

Secondary Research Question 2: Are the latent constructs measured invariantly across key subpopulations (education, region, income), ensuring comparability and external validity?

We frame the decision in a random-utility model and extend it to a hybrid choice (integrated choice and latent variables, HCM) specification. The utility difference between the paid and standard options depends on observed covariates (foregone earnings, educational status, family responsibilities) and on two latent constructs: a secular orientation factor and a national-attachment factor measured via multi-item Likert scale. The measurement model (ordered-probit indicators) corrects for noise and social-desirability bias, while structural equations tie latent means to demographics and local context.

2 Institutional Background and Policy Setting

According to [9] conscription is mandatory and upheld by every male citizen of the country. The ages between 20-41 are considered as "Draft Age". According to the legislation, the mechanism within the scope of this research applies only for time of peace. There are exemptions defined in the legislation which includes those with a medical report. In accordance with the law, males who have completed a four-year or higher education program are designated as reserve officer nominees. Based on the requirements of the Ministry of Defense, a portion of these nominees may voluntarily serve as reserve officers. Similarly, those who have completed two or three years education program are designated as non-commissioned officer nominees and they may voluntarily serve as NCOs. The remaining conscripts, irrespective of their educational attainment, fulfill their service obligation as privates. Furthermore, medical doctors, teachers and security workers are defined to have a more profession-oriented conscription experience. Additionally those with a criminal record of being a member of the organizations Turkish Government considers as

a threat to national security face a different conscription experience according to the law. Therefore the six month conscription leads to different outcomes for people with different backgrounds. For those without an exemption, can choose the paid military service route. They pay the paid military service fee and receive the basic training which takes one month. Its fee comes from 240,000 times the public servant indicator. Males within the draft age can exercise the right to defer until they are 22 if they are high school graduates, 28 if they are university graduates, and 35 if they pursue a postgraduate education abroad. Finally, those with a residence permit or work permit and at least 3-year work experience abroad can pay the same amount as other paid military subjects with the exception of the basic training. Anyone not resisting to do any of the aforementioned actions are considered draft resistor or draft evader depending on the time of their drafts.

Turkish conscription law was amended last in 2019. Therefore, the framework and the military experience before that year has differences to those after. Similarly, Turkish conscription law, despite the similarities to other countries' conscription systems is unique. In that sense [5] shows the Korean conscription system which has differences from the Turkish one. According to [5] the Korean government also demands conscription from every male citizen. They typically do it between the ages 18-28. The duration depends on the military department that cadets are assigned to. Different from the Turkish case, Republic of Korea has no paid military option. However, Korean legislation has a group-list method. Korean males are subjected to a physical examination and divided under groups. These groups are the main military service group, only wartime service group and total exemption group. Dual citizens must either leave the citizenship or do the conscription. Those living abroad must also come back to the Republic of Korea and do their military service. Also public service workers are considered doing "Special Service" therefore their mandatory service counts as the conscription. Also, Korean conscripts are given allowances "according to a budgetary limit". Similar to the Turkish case, Korean students can defer the draft process. On the other hand, draft evasion is serious crime in the Republic of Korea as well.

There are other countries with conscription around the world including but not limited to the Switzerland, Russia, Iran, Austria, Brazil and Mexico. However, the Turkish experience is unique in its own right which creates a gap in the literature in terms of the Turkish conscripts. [10]

3 Framework: From RUM to HCM

Discrete Choice Models (DCM) grounded in Random Utility Maximization (RUM) are the standard framework for modeling choices among discrete alternatives, with foundational applications in transportation (e.g., mode choice, car ownership, technology adoption). [4]

In our setting—mandatory military service in Turkey—individuals face a binary decision between a six-month standard service and a three-week paid exemption (bedelli). A purely “observable-attributes” specification, risks preference mismeasurement because unobserved attitudes such as, national attachment (patriotism) [7] and secular orientation [2]—can shift both baseline utilities and the marginal utilities of time and money. To address this, we embed a Hybrid Choice Model (also called an Integrated Choice and Latent Variables—ICLV—model) that links choices to latent constructs measured through psychometric indicators. [8]

3.1 Baseline Random-Utility Model

Let $j \in \{\text{paid}, \text{standard}\}$ and individual $i = 1, \dots, N$. Utilities:

$$U_{ij} = \alpha_j + \beta_{T,j} T_{ij} + \beta_{F,j} F_{ij} + \gamma_j^\top \mathbf{x}_i + \varepsilon_{ij}, \quad \varepsilon_{ij} \sim \text{i.i.d. EV1.} \quad (1)$$

Choice probabilities follow the multinomial logit:

$$\Pr(y_i = j \mid \cdot) = \frac{\exp(U_{ij})}{\sum_k \exp(U_{ik})}. \quad (2)$$

3.2 Latent Attitudes in Utility (HCM structure)

Introduce latent factors P_i (national attachment) and S_i (secular orientation). Allow both direct:

$$U_{ij} = \alpha_j + \delta_{jP} P_i + \delta_{jS} S_i + \beta_{T,j} T_{ij} + \beta_{F,j} F_{ij} + \gamma_j^\top \mathbf{x}_i + \varepsilon_{ij}. \quad (3)$$

Extend the model for interaction effects.

$$\begin{aligned} U_{ij} = & \alpha_j + \delta_{jP} P_i + \delta_{jS} S_i + (\beta_{T,j} + \theta_{TP,j} P_i + \theta_{TS,j} S_i) T_{ij} \\ & + (\beta_{F,j} + \theta_{FP,j} P_i + \theta_{FS,j} S_i) F_{ij} + \gamma_j^\top \mathbf{x}_i + \varepsilon_{ij}. \end{aligned} \quad (4)$$

Normalizations: fix one alternative-specific constant to zero; scale latent factors to mean zero, variance one.

3.3 Measurement Model for Latent Attitudes

Let z_{ik} be ordered responses (Likert) to items $k = 1, \dots, K$:

$$z_{ik}^* = \mu_k + \lambda_{kP} P_i + \lambda_{kS} S_i + \nu_{ik}, \quad \nu_{ik} \sim \mathcal{N}(0, 1), \quad (5)$$

$$z_{ik} = m \quad \text{iff} \quad \tau_{k,m-1} < z_{ik}^* \leq \tau_{k,m}, \quad m = 1, \dots, M_k. \quad (6)$$

Include balanced (positively/negatively keyed) batteries; test reliability and unidimensionality.

3.4 Structural Equations for Latent Means

$$P_i = \pi_{0P} + \boldsymbol{\pi}_P^\top \mathbf{w}_i + \eta_{iP}, \quad S_i = \pi_{0S} + \boldsymbol{\pi}_S^\top \mathbf{w}_i + \eta_{iS}, \quad \begin{bmatrix} \eta_{iP} \\ \eta_{iS} \end{bmatrix} \sim \mathcal{N}(\mathbf{0}, \Sigma). \quad (7)$$

Here $\mathbf{w}_i$ captures demographics (education, region, income), local context, and credit access.

3.5 Identification and WTP

With price-in-utils, marginal WTP for one-unit time reduction:

$$\text{WTP}_i = - \frac{\partial U_{ij} / \partial T_{ij}}{\partial U_{ij} / \partial F_{ij}} = - \frac{\beta_{T,j} + \theta_{TP,j} P_i + \theta_{TS,j} S_i}{\beta_{F,j} + \theta_{FP,j} P_i + \theta_{FS,j} S_i}. \quad (8)$$

Discuss scale identification, cutpoint normalizations, and anchoring of factor variances.

4 Data

Sampling frame; survey design; experimental variation (if any) in fee/duration.

5 Estimation

Estimator. Full-information maximum likelihood (FIML) for HCM, or two-step (factor scores $\rightarrow$ choice), with simulation for random effects if used.

Inference. Clustered/robust SEs; bootstrap for WTP; multiple-imputation for missing items if applicable.

Diagnostics. Item fit, reliability (ordinal alpha/omega), local independence, residuals.

6 Results

6.1 Main Parameters

Report α_j , $\beta_{T,j}$, $\beta_{F,j}$, $\delta_{j\cdot}$, $\theta_{\cdot\cdot,j}$, and factor loadings $\lambda_{k\cdot}$.

6.2 Heterogeneous WTP

Display distributions and contrasts by income, attitudes.

7 Counterfactual Policy Simulations

Revenue, manpower, take-up elasticities under alternative *bedelli* schedules and call-up timing. Distributional effects by income/attitude strata.

8 Robustness and Sensitivity

Alternative link (e.g., heteroskedastic logit), non-parametric mixing, alternative measurements, social desirability adjustments.

9 Measurement Invariance

MG-HCM or MG-CFA tests across education/region/income: configural, metric, scalar; alignment if needed; consequences for WTP comparability.

10 Conclusion

Summarize welfare and policy implications; external validity and limitations; avenues for future research.

Tables and Figures (templates)

Table 1: HCM Choice Model: Main Estimates

	Paid ($j = \text{paid}$)	Standard ($j = \text{std}$)	Diff.
ASC (α_j)	0.213	0.000	
Time cost $\beta_{T,j}$	-0.845	0.000	
Fee sensitivity $\beta_{F,j}$	-0.124	0.000	
Patriotism δ_{jP}	-0.210	0.150	
Secular orientation δ_{jS}	0.185	-0.090	
Time $\times$ Patriotism $\theta_{TP,j}$	0.095		
Fee $\times$ Secular $\theta_{FS,j}$	-0.032		
Controls γ_j (earnings, education,)	Included

Zorunlu Askerlikte Zaman ve Para Terci

ECON 635 – Discrete Choice Methods
Sabancı Üniversitesi / Sabancı University

Araştırma Katılım Onay Formu

Araştırmanın Başlığı: Zorunlu Askerlikte Zaman ve Para Tercihi: Türkiye’deki Bedelli Askerlik Uygulamasının Bir Karma Tercih Analizi

Araştırmacı(lar): [öğrenci adı / adları]

Ders: ECON 635 – Discrete Choice Methods

Ders Yürütücüsü: Prof. Eren İnci

Araştırmanın Amacı

Bu çalışma, bireylerin [konuyu kısaca açıklayınız, örn. “askerlik hizmeti ve bedelli askerlik arasındaki tercihleri”] konusundaki karar verme davranışlarını incelemektedir. Katılımınız, insanların farklı koşullar altında nasıl seçim yaptıklarını daha iyi anlamamıza yardımcı olacaktır.

Katılımın Kapsamı

Bu araştırma kapsamında sizden [kısa bir anket doldurmanız / alternatifler arasında seçim yapmanız / bazı soruları yanıtlamanız] istenecektir. Çalışmanın yaklaşık [--- dakika] sürmesi beklenmektedir. Katılımınızın bilinen bir riski bulunmamaktadır.

Gönüllülük Esası

Katılım tamamen gönüllülük esasına dayanmaktadır. İstedığınız zaman katılımınızı sonlandırabilir veya herhangi bir soruyu yanıtlamamayı tercih edebilirsiniz. Bu durumda hiçbir olumsuz sonuçla karşılaşmayacaksınız.

Gizlilik ve Veri Güvenliği

Anket yanıtlarınız anonim olarak değerlendirilecektir; ad, e-posta, TC kimlik numarası gibi kişisel tanımlayıcı bilgiler toplanmayacak veya üçüncü kişilerle paylaşılmayacaktır. Veriler, şifrelenmiş veya parola korumalı ortamlarda güvenli bir şekilde saklanacak ve ders tamamlandıktan sonra makul bir süre içinde silinecektir. Sonuçlar yalnızca toplulaştırılmış (örneğin ortalama, yüzde) istatistikler olarak raporlanacaktır.

İletişim

Araştırma hakkında sorularınız olması durumunda lütfen [öğrenci adı, e-posta adresi] ile iletişime geçiniz. Katılımcı haklarınız ile ilgili endişeleriniz olursa Prof. Eren İnci'ye ereninci@sabanciuniv.edu adresinden ulaşabilirsiniz.

Yukarıdaki bilgileri okudum ve bu araştırmanın amacını anladığımı, gönüllü olarak katılmayı kabul ettiğimi beyan ederim.

Katılımcının İmzası: _____

Tarih: _____

Ad Soyad (isteğe bağlı): _____

Consent to Participate in a Research Study

Study Title: [insert title]

Researcher(s): [student name(s)]

Course: ECON 635 – Discrete Choice Methods

Instructor: Prof. Eren İnci

Purpose of the Study

This study investigates decision-making behavior regarding [**briefly describe topic, e.g. “choices between standard conscription and paid short-term service”**]. Your participation will help us understand how people make choices under different conditions.

What Participation Involves

You will be asked to [**complete a short survey / make choices between alternatives / answer some questions**]. The activity is expected to take about [___ minutes]. There are no known risks associated with participating in this study.

Voluntary Participation

Your participation is completely voluntary. You may stop at any time or skip any question without any negative consequence. Your decision about participation will not affect your relationship with Sabancı University in any way.

Confidentiality and Data Security

All responses will be treated anonymously. We will not collect names, e-mail addresses, ID numbers or other direct identifiers, and no individual-level responses will be shared. Data will be stored in secure, password-protected or encrypted locations and deleted after the course is completed. Any results will be reported only in aggregate form (e.g. averages, percentages).

Contact Information

If you have any questions about the study, please contact [**student name, e-mail**]. If you have concerns about your rights as a participant, please contact Prof. Eren İnci at ereninci@sabanciuniv.edu.

By signing below, you indicate that you have read this information, understand the purpose of the study and voluntarily agree to participate.

Participant Signature: _____

Date: _____

Name (optional): _____

Part A. Hypothetical Service Options (Example)

In this section, we present several hypothetical situations regarding compulsory military service. In each situation, you are asked to choose between two options:

- **Option A:** Standard service (longer duration, no upfront fee).
- **Option B:** Paid exemption (*bedelli*) with short service (few weeks), an upfront fee.
- **Option C:** Paid exemption (*bedelli*) with short service (few weeks), an upfront fee.

Between scenarios, the **duration of service** and the **upfront fee** may change. In all scenarios, please imagine that:

- All other aspects of your life (job, family, health, etc.) remain as they are now.
- Amounts are in today's prices.
- The rules of the system are as described in each table.

For each scenario, please tick *one and only one* option.

Scenario 1

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	24 weeks	6 weeks	3 weeks
Upfront fee to be paid	0 TL	450,000 TL	800,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 2

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	20 weeks	4 weeks	2 weeks
Upfront fee to be paid	0 TL	400,000 TL	600,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 3

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	16 weeks	2 weeks	0 weeks
Upfront fee to be paid	0 TL	400,000 TL	500,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 4

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	24 weeks	12 weeks	0 weeks
Upfront fee to be paid	0 TL	500,000 TL	1,200,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 5

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	28 weeks	6 weeks	2 weeks
Upfront fee to be paid	0 TL	350,000 TL	800,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 6

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	24 weeks	4 weeks	1 weeks
Upfront fee to be paid	0 TL	300,000 TL	500,000 TL
Your choice (tick one)	☐	☐	☐

Scenario 7

	Standard Service	Paid Service 1	Paid Service 2
Total duration of service	32 weeks	8 weeks	4 weeks
Upfront fee to be paid	0 TL	400,000 TL	1,000,000 TL
Your choice (tick one)	☐	☐	☐

Part A. Screening and Basic Background

Please tick or write the most appropriate answer in each question.

A1. Age (in years): _____

A2. Citizenship status:

- ☐ Turkish citizen only
- ☐ Dual citizen (one of them Turkish)
- ☐ Non-Turkish citizen

A3. Current marital status:

- ☐ Single
- ☐ Married / cohabiting
- ☐ Divorced / widowed

A4. Highest completed education:

- ☐ Primary school or less
- ☐ High school
- ☐ Vocational / associate degree
- ☐ Bachelor's degree
- ☐ Master's degree or higher

A5. Current main status:

- ☐ Working full-time
- ☐ Working part-time
- ☐ Unemployed, seeking work
- ☐ Student
- ☐ Other (please specify): _____

A6. Region where you currently live (city):

A7. Type of area where you currently live:

- ☐ urban area (town / district center)
- ☐ Rural area / village

Part B. Military Service Status and History

B1. Have you completed compulsory military service in Turkey?

- ☐ Yes, I have completed it.
- ☐ No, I have not completed it yet.
- ☐ I am exempt from compulsory military service (permanent).

B2. If you *have completed* compulsory military service:

(If not applicable, skip to B4.)

B2.a) In which year did you complete your service? _____

B2.b) Which option did you use?

- ☐ Standard longer service (no paid exemption)
- ☐ Paid exemption (*bedelli askerlik*) with short service

B2.c) If you used *bedelli askerlik*: approximately what was the fee you paid?
(If you prefer not to say the exact amount, you may answer in ranges.)

Exact amount (optional): _____ TL

Or choose a range:

- ☐ Less than 100,000 TL
- ☐ 100,000–150,000 TL
- ☐ 150,001–200,000 TL
- ☐ More than 200,000 TL

B3. If you have *not yet completed* compulsory military service:

(If already completed or permanently exempt, you may skip this question.)

B3.a) What is your current status with respect to conscription?

- ☐ Not yet called up
- ☐ Deferred (e.g., due to education)
- ☐ Currently in the process (just called up)

B3.b) If you had to make the decision *today*, which of the following would you **prefer**, assuming the standard rules and fee levels currently in force?

- ☐ Standard longer service (no paid exemption)
- ☐ Paid exemption (*bedelli askerlik*) with short service
- ☐ Unsure / do not know

Part C. Household and Economic Situation

C1. How many people live in your household (including yourself)?

_____ person(s)

C2. How many people in your household earn an income (including yourself)?

_____ person(s)

C3. Approximate monthly net personal income (after tax) from all sources:

- ☐ No regular income
- ☐ Less than 17,000 TL
- ☐ 17,001–21,999 TL
- ☐ 22,000–29,999 TL
- ☐ 30,000–49,999 TL
- ☐ 50,000–89,999 TL
- ☐ 90,000–149,999 TL
- ☐ 150,000–higher
- ☐ Prefer not to say

C4. Approximate monthly net household income (after tax) from all sources:

- ☐ No regular income
- ☐ Less than 17,000 TL
- ☐ 17,001–21,999 TL
- ☐ 22,000–29,999 TL
- ☐ 30,000–49,999 TL
- ☐ 50,000–89,999 TL
- ☐ 90,000–149,999 TL
- ☐ 150,000–higher
- ☐ Prefer not to say

Part D. Attitudes Toward Country (National Attachment)

This section asks about how you feel toward your country. There are no right or wrong answers. Please indicate how much you *agree or disagree* with each statement.

Response scale:

	1	2	3	4	5
	Strongly disagree	Disagree	Neither agree nor disagree	Agree	Strongly agree

	Please tick one box per row				
	1	2	3	4	5
P1. I feel a strong sense of belonging to Turkey.	☐	☐	☐	☐	☐
P2. I am proud to be a citizen of Turkey.	☐	☐	☐	☐	☐
P3. I feel emotionally attached to the Turkish flag.	☐	☐	☐	☐	☐
P4. I would rather live in another country if I had the chance. (R)	☐	☐	☐	☐	☐
P5. I feel little loyalty to my country. (R)	☐	☐	☐	☐	☐
P6. When my country succeeds in something important, I feel personally happy.	☐	☐	☐	☐	☐
P7. I feel responsible for contributing to the well-being of my country.	☐	☐	☐	☐	☐
P8. In general, I do not feel very attached to Turkey. (R)	☐	☐	☐	☐	☐

Note: (R) indicates items that are typically reverse-coded in analysis.

Part E. Religion and Public Life (Secular Orientation)

Again, there are no right or wrong answers. Please indicate your agreement with each statement using the same 1–5 scale.

	Please tick one box per row				
	1	2	3	4	5
S1. Religion is mainly a private matter and should not play a direct role in government decisions. (S+)	☐	☐	☐	☐	☐
S2. Religious values should have an important influence on how laws are written. (R)	☐	☐	☐	☐	☐
S3. I support the principle of secularism (<i>laiklik</i>) in Turkey's constitution. (S+)	☐	☐	☐	☐	☐
S4. Public institutions (schools, courts, ministries) should remain neutral with respect to religion. (S+)	☐	☐	☐	☐	☐
S5. Religious leaders should have a strong influence on public decisions. (R)	☐	☐	☐	☐	☐
S6. I feel comfortable with people of different religions having the same rights as people of my own religion. (S+)	☐	☐	☐	☐	☐
S7. It would be better if religious rules were more important than state laws in daily life. (R)	☐	☐	☐	☐	☐
S8. The state should treat all citizens equally, regardless of their religious beliefs. (S+)	☐	☐	☐	☐	☐

Note: Items marked (S+) typically indicate higher scores on secular orientation; (R) items are candidates for reverse-coding.

Thank you very much for your participation.
